Education

Full Sail University

Bachelor of Science in Game Development — 3 Course Director Awards

Apr 2022 – May 2025

GPA: 3.66

Work Experience

Dev10 (Genesis10)

Software Engineer in Training

Mar 2026 – Present

Remote

- Enrolled in an intensive 12-module full-stack engineering program covering **Java**, **Spring Boot**, **SQL**, **React**, and application security
- Building layered Java applications applying the **repository pattern**, **dependency injection**, and **three-layer architecture** (data/domain/UI)
- Developing **Spring Boot REST APIs** with Spring MVC controllers, global exception handling, and Spring JDBC database connectivity
- Implementing **JWT authentication**, **BCrypt password hashing**, and ownership-based authorization across full-stack applications
- Writing comprehensive test suites using **JUnit 5** and **Mockito**, and building **React** frontends with hooks, React Router, and Fetch API integration

TheNetVR

Software Developer Intern

Sept 2024 – Mar 2025

New York, NY

- Refactored tightly coupled legacy architecture by decoupling critical systems (health, input, networking) into **independently testable components**, improving code maintainability and reducing bug resolution time
- Established **component-based architecture patterns** adopted as coding standards across **multiple development teams**, demonstrating technical leadership and improving team velocity
- Developed real-time VR systems handling **user input**, **state management**, and **network synchronization** using **C#** and **Unity**
- Managed version control via **GitHub** and led **weekly cross-functional syncs** to align technical implementation with design requirements

Projects

WealthView | [Source Code](#)

C# | ASP.NET Core 9 | Angular 21 | MySQL

- Built a **production-grade investment portfolio simulator** with an **ASP.NET Core 9** backend and **Angular 21** frontend, featuring live market data via **Alpha Vantage API**
- Implemented full vertical slices — **EF Core** repositories, **xUnit** test suites, service layer business logic, REST controllers, and Angular components
- Designed features including **JWT authentication**, **BCrypt** password hashing, bank transfers, trade execution with computed P&L, and a **Chart.js** portfolio performance dashboard
- Resolved **Angular race conditions** using sequential observable chaining and deferred canvas access for Chart.js rendering

AI Note Cleaner | [Source Code](#)

Java | Spring Boot | React | PostgreSQL

- Built a **full-stack application** with **Spring Boot 3.4** backend and **React/TypeScript** frontend that transforms notes using **Ollama (Llama 3.2)** AI integration via **Spring AI**
- Implemented **RESTful API** with input validation, **global exception handling**, and **28 unit/integration tests** using JUnit 5, Mockito, and MockMvc
- Designed **layered architecture** with JPA entities, Spring Data repositories, and **H2/PostgreSQL** persistence for note history tracking

Technical Skills

Languages: Java, C#, TypeScript, JavaScript, C++, Python, SQL, HTML/CSS

Backend: ASP.NET Core, Spring Boot, Entity Framework Core, Spring AI, REST APIs, JPA/Hibernate, Spring JDBC

Frontend: Angular, React, Tailwind CSS, Vite, RxJS, Chart.js

Testing: xUnit, JUnit 5, Mockito

Developer Tools: Git, GitHub, VS Code, Maven, Docker, Agile/Scrum, MySQL, PostgreSQL, DBeaver
