Education

Full Sail University

Bachelor of Science in Game Development — 3 Course Director Awards

Apr 2022 – May 2025

GPA: 3.66

Work Experience

TheNetVR

Software Developer Intern

Sept 2024 – Mar 2025

New York, NY

- Refactored tightly coupled legacy architecture by decoupling critical systems (health, input, networking) into **independently testable components**, improving code maintainability and reducing bug resolution time
- Established **component-based architecture patterns** adopted as coding standards across **multiple development teams**, demonstrating technical leadership and improving team velocity
- Developed real-time VR systems handling **user input**, **state management**, and **network synchronization** using **C#** and **Unity**
- Managed version control via **GitHub** and led **weekly cross-functional syncs** to align technical implementation with design requirements

Projects

AI Note Cleaner | [Source Code](#)

Java | Spring Boot | React | PostgreSQL

- Built a **full-stack application** with **Spring Boot 3.4** backend and **React/TypeScript** frontend that transforms notes using **Ollama (Llama 3.2)** AI integration via **Spring AI**
- Implemented **RESTful API** with input validation, **global exception handling**, and **28 unit/integration tests** using JUnit 5, Mockito, and MockMvc
- Designed **layered architecture** with JPA entities, Spring Data repositories, and **H2/PostgreSQL** persistence for note history tracking

Ascension Zero | [Demo](#)

C++ | Unreal Engine 5

- Led **10 developers** in architecting a **modular C++ framework** with **state machines** managing complex behaviors and **event-driven interactions**
- Optimized **performance-critical systems** through profiling, conducted **code reviews**, and established team development workflows

Era Code | [Demo and Code](#)

C# | Unity

- Developed complete application **solo in 4 weeks** with **UI systems**, **data persistence**, **state management**, and **inventory/economy systems**
- Engineered configurable spawn systems using **data-driven design patterns** with persistent **save/load functionality** across sessions

Jumping Jack | [Demo](#)

C++ | Vulkan | EnTT

- Built custom rendering pipeline with **Vulkan 3D API** and **EnTT ECS**, implementing **pixel-perfect collision detection** and responsive controls

Technical Skills

Languages: Java, C++, C#, TypeScript, JavaScript, Python, SQL, HTML/CSS

Developer Tools: Git, GitHub, Visual Studio, VS Code, Maven, CMake, Docker, Agile/Scrum, Jira

Libraries/Frameworks: Spring Boot, Spring AI, React, Vite, Tailwind CSS, JUnit, Unity, Unreal Engine 5, OpenGL, Vulkan
